Easy and Secure Locker Management

The intelligent, **self managing** locking system

Ubilock is a new and innovative lock that allows you to use and manage your lockers easily, securely and efficiently. The disadvantages of conventional locking systems with keys or non internet-based systems are being eliminated.

Features

Ubilock is equipped with an impressive amount of features like **USB** charging, **RGB** LED indication and **White LED** locker lighting.

Also burglary and incorrect locker use will be **detected and reported** to you or your colleague.

At the same time Ubilock will tell you how often a locker is or is not being used. This will enable a more **flexible working** environment.

Options

Besides the standard features, Ubilock lets you choose how you want your lockers to be used. You can use your existing or new **RFID** card, fingerprint, keypad, **smartphone** or a combination of different options.

With Ubilock's accompanying software you are able to add or change lockers and users. Including **insight** into locker usage to get the most out of your lockers. You can manage this on any PC or Device since it is **web based**.
